

TRAITI DE PONCTUATION 2E IDITION

"Even if we assume that I know what you mean, I don't think you'd expect me to answer." So now they both knew, and knew that the other knew. Each had tested the other's discretion, and both of them respected what they had found. Nothing more needed to be said. Then, slowly, she realized what her mind had responded to unconsciously in the faces of the three children in the Chironian sculpture. The artist had been not merely an expert, but a master. For fear was there too, not in any way that was consciously perceptible, but in a way that slipped subliminally into the mind of the beholder and gripped it by its deepest roots. That was why she had felt disturbed all the way back from Franklin. But there was still something else. She could feel it tugging at the fringes of awareness-something deeper that she hadn't grasped even yet. She turned her eyes to the sculpture again. where he feels at home. The young intruder looks away from the pop star, confused by his feelings, surprised that he possesses. The capsule arrived, and Jay fell silent while he digested what Pernak had said. As they climbed inside, Jay entered a code into the panel by the door to specify their destination in the Jersey module, and they sat down on an empty pair of facing seats as the capsule began to move. After a short run up to speed, it entered a tube to exit from Maryland and passed through one of the spherical intermodule housings that supported the Ring and contained the bearings and pivoting mechanisms for adjusting the module orientations to the ship's state of motion. For a brief period they were looking out through a transparent outer shell at the immensity of the Spindle, seemingly supported by a web of structural booms and tie-bars three miles above their heads, with the vastness of space extending away on either side, and then they entered the Kansas module where the scene outside changed to animal grazing enclosures, level upon level of agricultural traits, fish farms, and hydroponics tanks. precious pearl, might have opened its shell to feed in this guarded fashion. No one can take the gifts God gave you. Only. Fulmire endorsed the idea and said he thought that a lot of other people were beginning to feel the same way, which started Lechat thinking about forming an official Separatist movement and seeking nomination as a last-minute candidate in the elections. Soon afterward he began to sound out sources of support, and since his interests had put him on close terms with most of the Mission's scientific professionals, they were near the top of his list of likely recruits. Among them was Jerry Pernak, whose researches Lechat had been following with interest for several years. Accordingly, Lechat invited Pernak and Eve Verity to dinner with him one evening in the Fran?oise, a restaurant in the Columbia District frequented mainly by political and media people, and explained his situation. Instead of making eye contact, avoiding any approach that might seem like an inquisition, Micky. Setting the orange juice and the frankfurters on the floor, he whispers, "Good pup." Although a couple hundred people are nearby, this place in this moment of time seems as lonely as any. Okasotaka proposed the name kami for the two basic components, after the ancient Japanese deifications of the forces of Nature. The Japanese gods had possessed two souls-one gentle, nigi-mi-tama; and one violent, ara-mitama-and, accordingly, Okasotaka christened his two species of kami "nigions" and "araons," which a committee on international standards solemnly ratified and enshrined into the officially recognized nomenclature of physics. Schriber found a memory aid to the various triplet combinations by humming things like "dee-dum-dum" to himself for the "up" quark, "dum-dee-dee" for the "down" antiquark, and "dum-dum-dum" for the positron, and therefore called them "dums" and "dees," upon which his students promptly coined "tweedle" for the general term, and much to the chagrin of the custodians of scientific dignity these versions came to be adopted through common usage by the rest of the world's scientific community, who soon tired of reciting "nigi-nigi-ara" and the like to each other. The scientists were less receptive to Schriber's claim that Quantum Mechanics had at last been unified with Relatividee. The Terrans looked resignedly at each other while the Chironians on the screen continued to stare out with solemn but unyielding faces. They could warn Stern now and risk having to use their weapon while the ship still held a sizable population if he ignored the warning, or they could wait until he challenged them, which ran the risk of their having to retaliate without

warning if Stern chose to move first and challenge later. Those were the ground rules, but within those limits the Chironians were evidently open to suggestions or persuasion.. "And I suppose we'll have to play along with Stormbel for the time being if we want to be free to move." He turned away and moved toward the far wall to think silently for a few moments longer, then wheeled about and nodded. "Okay. Bret, you have to leave for the base right away. Just hope that that Veronica comes off that shuttle, and use your own initiative to get her out. That's all you have to worry about so, on your way." Hanlon nodded and disappeared back through the Orderly Room. "Steve," Sirocco said. "Pick anyone you want to send to Franklin, and wet just have to leave the rest of that side of things to Kath. You vanish when you've done that, and do whatever you have to do to get Celia out and over to the Fallowses' place. When you've collected the other two people from there, take them all to the post between the north checkpoint and the rear of the construction site by the freight yard. Maddock's section will be manning that sector from midnight to 0400. They know how to distract the SDs, and I'll make sure they're expecting you." Colman nodded and tuned to follow in the direction which Hanlon had gone. "Oh, and Steve," Sirocco called as a new thought struck him. Colman stopped at the door and looked back. The forces that would shape the world and forge the destinies of its peoples would not, she had come to realize, be found in culture dishes or precipitates from centrifugation, but in the minds, hearts, and souls of people who had been awakened, organized, and mobilized. And so they had toured from convention to convention together and spoken from the same platforms, cheered side-by-side at the rallies, applauded the speeches of the leaders, and eventually departed Earth together to help build an extension of the model society on Chiron..Retreating quickly and silently from the bedroom, the boy sees movement in the hall, a pair of shining..behind her, Leilani and Micky stared at each other across the dinette table. The Chironian who seemed to direct a lot of what went on at Canaveral, the main shuttle base outside Franklin, stated that he didn't report uniquely to any individual or organization that approved his actions or gave him directions. So who told him how the place was to be run? It depended. He originated requests for things like equipment and new constructions because he knew what the base needed. How did he know? Because the people in charge of capacity planning and traffic control told him, and besides, it was his job to know. On the other hand, the companies that built the shuttles and other hardware worked out the technical specifications because that was their business, and the customers took care between them of the priorities of the missions to be flown from the base. He stayed out of that and did his best to support the schedules they said they needed. So ultimately, who was in charge? Who told whom to do what, and who did it? It depended. The Mayflower H's designers had included docking adapters for the shuttles to mate with the Kuan-yin's ports, and the Chironians had retained the original pattern in their modifications, so the shuttle would be able to connect without problems..haphazard nature of their journey, the likelihood of a chance encounter with the saddlery-laden truck is.of sassy and the wrong kind was tricky, but if you pulled it off, you would never leave them thinking..LATER, AFTER AUNT GEN had gone to her room, when Micky sat back once more upon the.Micky wasn't surprised to find herself returning the wave. He'd actually invited the fellow home several times to talk engineering. Colman had some fascinating ideas. He frowned and shook his head before he could stop himself. "Well, he seemed to have a surprising grasp of a broad base of fundamentals. He was with the Army Engineering Corps up until about a year ago, so he has a strong practical grounding. And he's studied extensively since we left Earth. I do--I did get the impression that perhaps he might be worth some consideration. But of course that's just an opinion.".."That's okay," Colman said. "We just have to take some measurements." Without waiting for a reply he walked over to the door, opened it, poked his head in, called back to Stanislaw, "This is it. Where's Johnson?" and went inside. Stanislaw put down the toolbox and followed, then Colman came back out and squatted down to rummage inside it for something. Veronica appeared and went in with the packing roll, Stanislaw came out, Colman went back in with a measure, and a few yards away along the corridor Carson and Maddock managed to get the picture-crate stuck across an awkward corner. Jay couldn't see it either. "Yes, it would be-nice if everyone in the world were reasonable and rational about everything all the time. But they can't be, can they? Chironians have the same mix of genes as everyone else. There can't be anything radically different."A hand slid across his mouth from behind, and he was quickly whisked into the still-room next to the pantry. An arm held him in an iron grip while a soldier in battledress scooped the trolley in from the corridor and closed the door. There were more of them in there, with a civilian. They looked mean and in no mood for fooling around..But no Borftein was present to save the situation at the side entrance. "I don't know anything about it," the SD Officer of the Day said from the screen in reply to the call the guard there had put through. "Those orders are incorrect. Detain those men." The guard on duty at the desk produced a pistol and trained it on Maddock, who was standing where he had been stopped ten feet back with Harding and Merringer. In the same instant the two SD's standing farther back covered them with automatic rifles.."Ooh... I wouldn't want to do that," Amy said. ..Jean looked away as she heard the front door open. "And won't every one of them poor SD fellas back in the shuttle be eating his heart out with envy and just wishing he could be out there with the same opportunity to risk himself for flag and country." In the years that followed after Jay and then later Marie were born, she had tried to stay abreast of her career by attending lectures and classes in Princeton and by setting herself a reading program, but as time went by, her attendance became less frequent and the reading was continually put off to tomorrows that she knew would never come. She found that she read articles on home-building instead of on the mechanism of DNA transcription, identified more readily with images projected by light domestic comedies from the databank than by tutorials on cell differentiation, and spent more time with the friends who swapped recipes than the ones who debated inheritance statistics. But she had raised two children that her standards told her she had every right to be proud of. She was entitled to rewards for the sacrifices she had made. And now Chiron was threatening to steal the rewards away.. Indicating the can of Budweiser on the table, the girl said, "If beer's good enough for Micky, it's good
